Attempt History

Attempt #2
Aug 06, 5:41 PM

Marks: 4

Q No: 1 Correct Answer

Marks: 1/1

Which is the valid conditional statement among the following to check if a is greater than 2?

- if a > 2
- if (a > 2)
- if a > 2: You Selected
- if "a > 2"

To check if a is greater than 2 the if statement is used. Here comparison operator (>) shall be used to compare the value of variable a with 2. The ":" in the if statement is used to separate the header of the compound statement from the body. So, the correct way of using the if statement, in this case, is

```
if a > 2:
```

Q No: 2 Correct Answer

Marks: 1/1

Which keyword do we use to add alternative conditions for the if statement?

- else if
- elseif
- elif You Selected
- All of the above

The syntax for if conditions with elif statement is:

```
if test expression:
    Body of if
elif test expression:
    Body of elif
else:
    Body of else
```

Here elif is used to check for a different test expressions as an alternative to write mulitple if statements

---

Q No: 3 Correct Answer

Marks: 1/1

Identify the correct output of the following code

```
if 4 + 3 == 9:
 print("The addition of 4 and 3 is correct")
else:
 print("The addition of 4 and 3 is not correct")
print("Hello")
```

- The addition of 4 and 3 is correct

  Hello

- The addition of 4 and 3 is not correct

  Hello

  You Selected

- The addition of 4 and 3 is not correct

- Hello

The addition of 4 and 3 is 7 and is not equal to 9 hence else statement will be executed. The last print statement is outside if statement so it will be by default executed.

Q No: 4 Correct Answer

Marks: 1/1

What will be the output of the following code?

```
a = b = TRUE
if (a == b):
  print("Hello")
else:
  print("Well done")
```

- Hello
- Well done
- TRUE
- Error — You Selected

Here "TRUE" is not defined so can not be compared with a and b hence Python will prompt NameError: name 'TRUE' is not defined.
