Practice Quiz 1.2 - Collection of Variables

Type	:	Practice Assessment
Questions	:	10
Time	:	1h
Scoring Policy	:	Highest Score
Your Marks	:	10/10

Instructions

RETAKE

Attempt History

Attempt #1
Aug 09, 3:29 PM

Marks: 10

Q No: 1 Correct Answer

Marks: 1/1

What will be the output of the following snippet?

```
repeated_list = [2] * 4
print(repeated_list)
```

- [ ] [8]
- [x] [2, 2, 2, 2] You Selected
- [ ] [8, 8, 8, 8]
- [ ] [[2], [2], [2], [2]]

The * operator multiplies numbers of elements rather than multiplication of element. 4 times of [2] will create the list [2, 2, 2, 2].

Q No: 2 Correct Answer

Marks: 1/1

Which of the following codes can be used to print the second element of the below list?

```
fruit = ["apple","orange","grapes","watermelon"]
```

- [ ] print(fruit[2])
- [ ] print(fruit['orange'])
- [x] print(fruit[1]) You Selected
- [ ] print(fruit(2))

The list indexing starts from 0 in Python. Hence, fruit[1] will give the second element of the list fruit.

Q No: 3 Correct Answer

Marks: 1/1

Which of the following codes can be used to replace the first element of the list fruit with "strawberries"?

```
fruit = ["apple","orange","grapes","watermelon"]
```

- fruit.append('strawberries')
- fruit.replace('strawberries')
- fruit[0] = "strawberries" — You Selected
- fruit[1] = "strawberries"

Indexing can be used to select and replace the first item in the list. The first element has the index position 0. Hence, fruit[0] returns the first element. The value of fruit[0] can be replaced using the assignment operator.

Q No: 4 Correct Answer

Marks: 1/1

Which of the following snippets can be used to iterate through the list and print its elements?

```
alphabet = ['a','b','c']
```

```
for i in range(alphabet):
 print(i)
```

You Selected

```
for i in alphabet:
 print(i)
```

```
for i in alphabet:
 print i
```

```
for i in range(len(alphabet)):
 print(i)
```

for loop can be used to iterate through the list and print the list items.

The correct syntax is:

```
for item in list:
    print(item)
```

Q No: 5 Correct Answer

Marks: 1/1

Which of the following snippets can be used to print squares of all numbers present in the list = [1, 12, 24, 36, 11, 20,50]?

You Selected

```
number = [1, 12, 24, 36, 11, 20,50]
for i in number:
 sq = i * i
 print(sq)
```

```
number = [1, 12, 24, 36, 11, 20,50]
for i in number:
 sq = i * 2
 print(sq)
```

```
number = [1, 12, 24, 36, 11, 20,50]
for i in number:
 sq = i ** i
 print(sq)
```

```
number = [1, 12, 24, 36, 11, 20,50]
for i in number:
 sq = number * number
 print(sq)
```

The correct command to find the square of the list elements is *i * i*.

Q No: 6 Correct Answer

Marks: 1/1

Which among the following code is used to get the number of elements present in a list ?

- name_of_list.shape
- length(name_of_list)
- len(name_of_list) — You Selected
- None of the Above

Inbuilt function **len()** is used to get the length of the given string, array, list, tuple, dictionary, etc.

Q No: 7 Correct Answer

Marks: 1/1

Choose the appropriate code to remove the 'yellow' color from the list mentioned below:

```
color = ['white','red', 'blue', 'green','blue','yellow', 'black']
```

- color.pop('yellow')
- color.pop('5')
- color.pop(5) — You Selected
- color.remove(5)

pop(index) method removes and returns the item at the specified index.

Q No: 8 Correct Answer

Marks: 1/1

Which of the following built-in methods can be used to check the length of the following list?

```
color = ['white','red', 'blue', 'green','blue','yellow', 'black']
```

- length(color)
- len(color) — You Selected
- length_list(color)
- find_len(color)

The built-in method len(obj) returns the number of items in a container.

Q No: 9 Correct Answer

Marks: 1/1

Choose the appropriate snippet to create and print a dictionary with the following information.

brand = Audi

Model = Q2

Year = 1980

```
car = { "brand" : "Audi","model" : "Q2", "year" : 1980}
print(car)
```

You Selected
