Session Plan - Introduction to Python

Learning Objectives:

- To gain an overview of Python and its unique features that enable it to occupy an important position in the field of Data Science and Machine Learning
- To get a good introduction to the main ideas in Python programming before diving into Data Science and Machine Learning

Session Structure:

Duration	Topic	Details
5 min	Mentor Introduction	• Mentor Introduction
5 min	Explanation of Session Structure and Learning Objectives	• Reflection on the agenda and learning ol session
15 min	Conceptual Discussion	• Brief overview and history of Python • Market synopsis of the Python industry • Why is Python relevant for Data Science
10 min	Q&A	• Questions and ideas on the topics discus
25 min	Data Types and Data Structures	• Explanation about data types (integer, st performing basic arithmetic operations, various data structures (List, Tuple and D available in Python

10 min	Comparison Operators	• Discussion on how comparison operator output generated after using these oper
20 min	Conditional Statements	• Explanation about if, else statements
15 min	Basic 'for' Loop	• Discussion of the 'for' loop and usage of operators within it
15 min	Q&A	• Clearing any doubts regarding Python fu loops or any other topic discussed in the

Important points to note:

- The section for the conceptual discussion is intended to be an interactive one where it is expected that the learners in the group will share the most challenging questions they would want to be discussed in the session.
- Log in for your session 5 min before and make sure you are ready with all the material to be used for the session.
- Be well prepared for the session, ensure to watch all the videos, related codes.

Happy learning!
