Session Plan - Introduction to Statistics

Learning Objectives:

- To gain an introduction to statistics and understand the idea of statistical thinking.
- To get an overview of importance of statistics for data science and solve business problems using descriptive statistics along with data exploration and visualization using essential python libraries - pandas and seaborn

Session Structure:

Duration	Topic	Details
5 min	Mentor Introduction and Learning Objectives	• Mentor Introduction • Reflection on the agenda and learning objectives of the session
15 min	Introduction to Statistics	• What is Statistics? • What is a statistical thinking approach • Statistics for data scientists.
15 min	Descriptive Statistics	• Overview of Descriptive Statistics • How to describe your data? • Discussion on measures of central tendency like mean, median, mode
15 min	Q&A	• Questions and ideas on the topics discussed so far
50 min	Case Study	• Loading and checking data in python • Grouping and sorting the data • Visualising the data and sharing insights and observations
20 min	Next Steps and Q&A	• Key takeaways from the session and the way forward • Questions and ideas on the topics covered in the session

Key points to note:

- It is upon the mentor's discretion to decide how much time to spend on what questions/topics and the goal should be to cover the most fundamental questions first that are in the interest of the whole group.
- It is likely that some questions may not get covered in the session due to various reasons and such questions will be answered post the session. It is expected that learners will share such questions via support requests on Olympus.
- Log in for your session 5 min before and make sure you are ready with all the material to be used for the session

Happy learning!
