Course Content

Session Plan - DS Application Case Study

Learning Outcomes

- Understand how Data Science can be used to solve a business problem
- Get an overview of an end-to-end solution
- Learn about how an ML model serves as the heart of the solution
- Understand how the model outputs are utilized by a business

Key Points to Note

- The objective of this week is to experience how businesses use Data Science with tools & technologies involved to solve problems
- The outcome of this week is not to understand the tiny details like codes and syntax but to focus on how an end-to-end Data Science solution works, the methods, and the final output/results
- Do not worry about the details of how something was created - you will learn the concepts demonstrated over the duration of this program
- Think of this week as a preview of what you will be capable of doing at the end of this program

Session Structure

Duration	Topic	Details
5 min	Agenda	• Set the agenda for the session and clarify the learning outcomes
5 min	Problem Statement and End-to-end Solution Overview	• Mention the problem statement • Give a high-level overview of the end-to-end Data Science solution
10 min	Business Problem Understanding	• Explain the business context and the problem definition

20 min	Data Gathering and EDA	• Explain the different sources of data and how they are captured and stored • Show the sample data and ask questions about what the learners understand from the data at a first glance • Explain the need for EDA and cover the EDA summary
5 min	Break	
30 min	Model Building and Deployment	• Explain the need for an ML model and the different steps involved in building it • Explain the business consequences of model errors • Explain the importance of model deployment • Illustrate a deployed ML model
30 min	Metrics, Dashboarding, and Decision Making	• Explain how the model output is used to create dashboards that are consumed by multiple stakeholders to get a sense of the business • Illustrate how the business impact is measured and decisions made using the dashboards
15 min	Extended Q&A	• Discuss the doubts regarding the concepts or any other relevant questions
